

## MODEL 7029 OUTBOARD MOTOR TIE BAR

Kobelt Manufacturing has developed unique tie bars for multiple outboard motors mechanical interconnection. The purpose is to synchronize the movement of two or more outboard motors so the steering angle stays the same. These tie bars are available in any lengths up to 5 ft. For other sizes and applications please contact our sales department. We specially manufacture the end threads 4" long so they may be cut as required by the installer. Constructed entirely of bronze and stainless steel, these bars are highly compatible with the salt water environment.
