

Picture shows Console equipped
with optional instrumentation

MODEL 7175-2000 INSTRUMENT CONSOLE

This multi-purpose console mounted panel can be located on pilothouse dash or overhead for easy viewing of rudder angle indicators and access to mode selector switches, station select switches, or instruments of your choice.

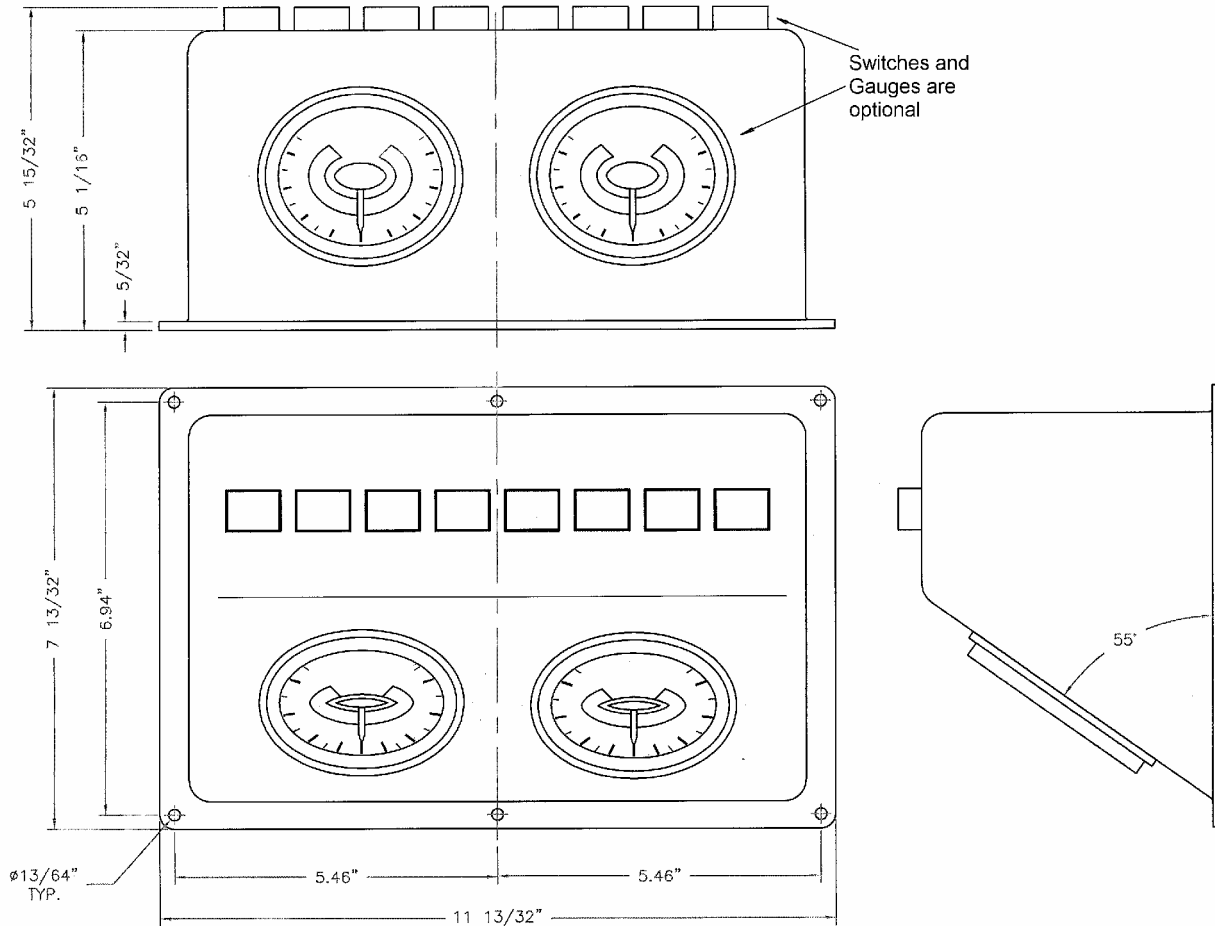

The face of the cabinet with its beneficial angle allows for viewing of the instruments without reflections or glare from the sunlight.

The 7175-2000 die cast bronze cabinet can accommodate two model 7175 rudder angle indicators (as shown in picture above) or four of the smaller 7180 indicators. The selector switches can be fitted across the top, or if you prefer on the face of the cabinet, could be any of the many choices like our 6511-SW2 non-waterproof (combination switch with lens) or 6511-SW3 waterproof (separate button and lens) with plenty of finger room inside the cabinet for access to the wiring.

The product normally comes in epoxy black and could come in other finishes like chrome or white.

Order a basic 7175-2000 console and install your own displays and controls. See the dimensions on the other side of this sheet.

7175-2000 Console
